[Oil and Natural Gas Economy in Argentina](#) Victor Bravo,Nicolas Di Sbroiavacca,2021-02-08 This book gathers four papers authored by Víctor Bravo and Nicolás Di Sbroiavacca, Oil and Natural Gas Engineers, specialized in Energy Economics. The main axis of the book is the application of the exploitation techniques of Oil and Natural Gas in Argentina, by the so-called "conventional" methods, in comparison with the so-called "Fracking", (name massively used in the First World and particularly in the United States of America). Argentina has important Oil and Natural Gas resources in different regions of its wide geography. To develop these "non-conventional" techniques has generated endless controversies all over the world, mostly due to its estimated environmental impact and the need of significant requirement of large capitals for investment. Argentina is not out of this relevant controversy because in the mind of the maximum national authorities, fracking is one of the main factors that may contribute to generate monetary funds devoted to the payment of the immense foreign debt of this country. Other authors estimate that it is not possible to develop our country just on the basis of the massive exploitation and boundless export of natural resources. Consequently, fracking is undoubtedly a topic of National Energy Politics. In this scenario, a previous analysis of the National Energy Politics of the recent governments of Argentina, after the bloody military dictatorship of 1976-1983 and the return to democratic governments in December 1983. This analysis is done over the chapters "Analysis of the National Law No 27007 (known as the "Hydrocarbon Resources Law") and the Oil and Natural Gas politics", the "Oil and Natural Gas Politics of the period from 2003 to 2014" and "The Argentine Energy Politics during the 2014-2018 period". Later on, the "Fracking" case is fully developed with two complementary analyses. One of them is basically centered on the technical and prospective scenarios for "fracking": "Shale Oil and Shale Gas in Argentina: Situation and Perspectives". The other one, "A technical opinion about Fracking", contemplates the impacts resulting from the use of these techniques, especially those concerning the environment. Anyhow, each of the chapters are self-contained, thus permitting separate reading of any of them.

[Anthropogenic Pollution of Aquatic Ecosystems](#) Donat-P. Häder,E. Walter Helbling,Virginia E. Villafañe,2021-09-30 This book provides examples of pollutants, such as accidental oil spills and non-degradable plastic debris, which affect marine organisms of all taxa. Terrestrial runoff washes large amounts of dissolved organic materials from agriculture and industry, toxic heavy metals, pharmaceuticals, and persistent organic pollutants which end up into rivers, coastal habitats, and open waters. While this book is not intended to encyclopedically list all kinds of pollution, it rather exemplifies the problems by concentrating on a number of serious and prominent recent developments. The chapters in this book also discuss measures to decrease and remove aquatic pollution to mitigate the stress on aquatic organisms. Aquatic ecosystems provide a wide range of ecological and economical services. In addition to providing a large share of the staple diet for a fast growing human population, oceans absorb most of the anthropogenically emitted carbon dioxide and mitigate climate change. As well as rising temperatures and ocean acidification, pollution poses increasing problems for aquatic ecosystems and organisms reducing its functioning and services which are exposed to a plethora of stress factors.
