To know the username, type: git config user.name To know the email, type: git config user.email These two output just the name and email respectively and one doesn't need to look through the whole list. Comes in handy. [Understanding .get\(\) method in Python - Stack Overflow](#) The sample code in your question is clearly trying to count the number of occurrences of each character: if it already has a count for a given character, get returns it (so it's just incremented by one), else get returns 0 (so the incrementing correctly gives 1 ...
