Operations and Basic Processes in Steelmaking Luis Felipe Verdeja González,Daniel Fernández González,José Ignacio Verdeja González,2021-03-24 This book describes the operations and industrial processes related to the production of steel. The chapters cover the second part of the iron and steelmaking process, called steelmaking, presenting the stages of the

process until obtaining the finished steel product in different formats for distinct applications. This book reports significant operating variables of the processes and basic operations of the steelmaking. The chapters contain numerous solved exercises conceptually supported on the thermodynamic and kinetic fundamentals of the production of steel from the pig iron in the Basic Oxygen Furnace (BOF) and the production of steel and ferroalloys in Electric Arc Furnaces (EAF). The thermal and mechanic fundamentals of the hot rolling operations and the mechanical fundamentals of the cold rolling, forming, and wire drawing to obtain different steel products are also reported. The book summarizes the strengths and uncertainties of steel as a structural material.

Ciència dels materials Molera i Solà, Pere, Montserrat Cruells Cadevall, Núria Llorca i Isern, Juan Viñals Oliá, 2007-09-17 A la introducció del llibre Ciència dels Materials es defineixen els materials metà·l·ics, ceràmics, polimèrics i compostos. A continuació, s'estudien les estructures cristal·lina, microscòpica i macroscòpica dels diferents materials i les possibilitats de transformar-les per tractaments tèrmics, mecànics i químics, incident en els diagrames termodinàmics de les fases en sistemes fonamentalment binaris.. Les propietats dels materials es descriuen a bastament, degut a la importància que tenen de cara a les diferents aplicacions. En aquesta obra es divideixen en mecàniques, elèctriques, magnètiques, tèrmiques, òptiques, químiques (corrosió) i tecnològiques. En la part descriptiva s'expliquen els diferents materials (metalls, ceràmics, polímers i compostos) i els exemples més representatius, tot destacant la relació entre les propietats i l'estructura, fonamentalment la microestructura, posant en evidència la possibilitat de modificar les propietats amb el diferents tractaments.. L'últim capítol del llibre es destina al reciclatge i reutilització dels materials d'acord amb normatives d'estalvi energètic i mediambientals.. Cal observar que totes aquestes pàgines s'il·lustren amb profusió de gràfics i microestructures amb la finalitat de destacar la importància dels materials en la vida quotidiana i la relació biunívoca entre aplicacions i propietats, susceptibles d'ésser modificades mitjançant tractaments mecànics, tèrmics i químics.

Advances in Design for Inclusion Giuseppe Di Bucchianico, 2018-06-23 This book addresses a range of topics in design, such as universal design, design for all, digital inclusion, universal usability, and accessibility of technologies for people regardless of their age, financial situation, education, geographic location, culture and language. It especially focuses on accessibility for people with auditory, cognitive, neurological, and visual impairments, ageing populations, and mobility for those with special physical needs. The book explores some of the overlaps between inclusive design and web accessibility to help managers, designers, developers, policy makers, and researchers optimize their efforts in these areas. Based on the AHFE 2018 International Conference on Design for Inclusion, held on July 21-25, 2018, in Orlando, Florida, USA, it discusses new design technologies and highlights the disparate needs of the individuals within a community. Thanks to its multidisciplinary approach, it is a valuable resource for readers from various backgrounds, providing them a timely, practice-

oriented guide to design for inclusion.

Maquinarias y equipos para la industria de alimentos Mejía Gutiérrez, Luis Fernando, Díaz Arango, Félix

Octavio, Ormaza Zapata, Ángela María, 2023-05-12 Dada la evolución de los procesos de producción de alimenots y el papel que desempeña el Ingeniero de Alimentos, la maquinaria y los equipos son elementos indispensables para la optimización de las operaciones en planta y el aseguramiento de la calidad. El conocimiento de las características generales de los materiales usados en ingeniería, los diferentes tipos de maquinaria utilizados en la industria de alimentos, su grado de automatización, dimensionamiento, selección, operación y mantenimiento son quehacer del Ingeniero de Alimentos y ciencias afines, para la planeación de la producción y el desarrollo de los procesos industriales. Este texto constituye, una guía de la asignatura Maquinaria y equipos y resistencia de materiales, para el programa de Ingeniería de Alimentos de la Universidad de Caldas. Trata los diversos aspectos relacionados con los cálculos indispensables para determinar especificaciones en los equipos y accesorios, que garantizan el éxito de los procesos productivos alimentarios desde el punto de vista del uso eficiente de los equipos y servicios, instalaciones y tipos de mantenimiento y contratación, bajo el cumplimiento de las normas vigentes en cada uno de los aspectos relacionados con la inocuidad y comercialización de alimentos procesados y empacados.

Organización, gestión y ejecución de proyectos industriales Storch de Gracia, José María, Herrero Sánchez,

Borja, 2018-09-01 El lector tiene en sus manos un libro circunscrito a la organización y gestión de proyectos industriales. El texto se enfoca a la industria Química, pero la forma en que los autores exponen, analizan y desarrollan los conceptos de la gestión de proyectos, lo hace también válido para otros tipos de industria, como la energética. Los objetivos de los proyectos son evaluar, proponer, contratar, diseñar, construir y arrancar una o varias plantas industriales capaces de transformar unos bienes y servicios en otros de valor mayor. Esto no de cualquier manera, sino optimizando, a lo largo de la ejecución, la tensión entre precio, plazo y calidad. La obra se divide en dos partes. La primera aborda conceptos generales de la gestión de proyectos industriales, como son, por ejemplo: las estimaciones económicas, la planificación, el control de actividades, etc. La segunda parte desarrolla la secuencia normal en la ejecución de los proyectos partiendo de la propuesta técnica y económica, pasando por el diseño y la gestión de acopios hasta llegar a la construcción y la puesta en marcha de una planta industrial.

Fundamentos de la ciencia e ingeniería de los materiales William F. Smith, 2023 Resentar diversos temas en este

campo con la amplitud y profundidad adecuadas. La fuerza del libro está en su enfoque en los conceptos clave de la ciencia de los materiales (conocimiento básico) seguido de la aplicación de principios científicos en la selección e ingeniería de materiales (conocimiento aplicado). Los conceptos básicos y aplicados se integran a través de explicaciones textuales concisas, imágenes relevantes y estimulantes, ejemplos de problemas detallados, suplementos electrónicos y problemas de tarea. Por lo tanto, este libro de texto es adecuado tanto para un curso de introducción a los materiales en el nivel de segundo año, como para un segundo curso más avanzado en ciencia e ingeniería de los materiales. Los problemas de fin de capítulo han sido clasificados según el nivel de aprendizaje/comprendión que el instructor espera del estudiante. La clasificación se basa en la Taxonomía de Bloom y pretende ayudar tanto a los estudiantes como a los instructores a establecer metas y estándares para los objetivos de aprendizaje. Se han desarrollado más de 150 problemas nuevos que pretenden hacer pensar a los estudiantes de una manera más profunda y reflexiva. Este es un objetivo importante de los autores para ayudar a los profesores a formar ingenieros y científicos que realicen sus actividades en un dominio cognitivo superior.

Endocrine Disruptors M. Metzler, 2006-03-28 The field of endocrine disruption or endocrine active compounds (EACs), which is just emerging and still controversial, is comprehensively covered by leading experts in Volume 3, Subvolumes L (the present volume, Part I) and M (Part II). The major classes of endocrine active chemicals are discussed, as well as methods for their detection and their association with health disturbances in humans and wildlife. The etiology of several of the human diseases associated with endocrine disruptors, e.g. breast and prostate cancer, decreased fertility and malformations, is still poorly understood, and the current state of knowledge is presented. Since hormonally active agents appear to have the potential of both adverse and beneficial effects, the evidence of health benefits associated with endocrine active compounds in humans is also presented. Basic chapters on the mode of action of EACs and on the etiology of the associated diseases facilitate the understanding of this complex subject for non-medical readers.

Tecnologia de fluids alimentaris Mercè Raventós Santamaría, 2005 Els objectius que es persegueixen en introduir l'estudiant d'enginyeria aplicada a les indústries alimentàries en les assignatures més vinculades amb la tecnologia del processament dels aliments són fonamentalment que coneui els processos de la indústria agroalimentària, els principis bàsics que els regeixen i els equips industrials que s'utilitzen més. La idea fonamental que ha guiat l'elaboració d'aquest llibre ha estat posar a disposició de l'alumnat els coneixements principals que cal adquirir per introduir-se en els ensenyaments relatius a les operacions unitàries en la indústria alimentària (capítol 1) i, més concretament, a la tecnologia dels fluids alimentaris (reologia, manipulació, transport i bombeig de fluids), fent èmfasi en els aspectes pràctics tant del mesurament de les propietats reològiques (capítol 3) com del bombeig (capítol 9). El pas per l'ESAB ha de permetre aprendre una forma de raonar i de plantejar problemes i les seves possibles solucions. Tant de bo que aquesta base serveixi per donar

més eficàcia a les activitats i a la formació que els alumnes reben en les assignatures posteriors, relacionades amb les tecnologies més específiques dels diferents subsectors de la indústria alimentària.

The Natural Environment and the Biogeochemical Cycles P. J. Craig, W.S. Fyfe, 1980 This volume addresses a broad spectrum of the environmental issues surrounding organic bromine and iodine compounds. It covers their partition among the environmental compartments and the potential for their long-range dissemination. The important issue of their atmospheric chemistry is discussed in detail in the context of ozone depletion and global warming, and the significant difference between the reactions of methyl bromide and methyl iodide are underscored. The mammalian toxicity is discussed and the mechanisms of the degradation and transformation of organic bromine and iodine compounds addressed. There has been considerable interest in naturally occurring metabolites in the current debate on the fate and partition of methyl bromide that is an important fungicide and is produced in substantial quantities as a metabolite of marine algae. The possible natural occurrence of diphenyl ethers that are used as flame retardants have also been raised. A discussion is given on plausible mechanisms for the biosynthesis of representative organic bromine and organic iodine metabolites. Reaction pathways are illustrated throughout and comprehensive references are given. .
