Sugar Cane Cultivation and Management H. Bakker, 2012-12-06 This volume is intended for reference by the

commercial sugar cane grower. Disciplines are covered for the successful production of a sugar cane crop. A number of good books exist on field practices related to the growing of sugar cane. Two examples are R.P. Humbert's *The Growing of Sugar Cane* and Alex G. Alexander's *Sugarcane Physiology*. Volumes of technical papers, produced regularly by the International Society of Sugar Cane Technologists, are also a source of reference. Perhaps foremost, local associations, such as the South African Sugar Technologists' Association, do excellent work in this regard. In my forty-five years of experience with the day-to-day problems of producing a satisfactory crop of sugar cane, deciding what should be done to produce such a crop was not straightforward. Although the literature dealing with specific subjects is extensive, I tried to consolidate some of the material to provide the man in the field with information, or an overview of the subject matter.

Principles of Soil Chemistry, Fourth Edition Kim H. Tan, 2011-07-08 Learn the secrets of soil chemistry and its role in agriculture and the environment. Examine the fundamental laws of soil chemistry, how they affect dissolution, cation and anion exchange, and other reactions. Explore how water can form water-bridges and hydrogen bonding, the most common forces in adsorption, chelation, and more. Discover how electrical charges develop in soils creating electrochemical potentials forcing ions to move into the plant body through barriers such as root membranes, nourishing crops and plants. You can do all this and more with *Principles of Soil Chemistry, Fourth Edition*. Since the first edition published in 1982, this resource has made a name for itself as a textbook for upper level undergraduates and as a handy reference for professionals and scientists. This fourth edition reexamines the entire reach of soil chemistry while maintaining the clear, concise style that made previous editions so user-friendly. By completely revising, updating, and incorporating a decade's worth of new information, author Kim Tan has made this edition an entirely new and better book. See what's new in the Fourth Edition Reexamines atoms as the smallest particle that will enter into chemical reactions by probing new advances testifying the presence of subatomic particles and concepts such as string theory Underscores oxygen as the key element in soil air and atmosphere for life on earth Reevaluates the idea of transformation of orthoclase into albite by simple cation exchange reactions as misleading and bending scientific concepts of ion exchange over the limit of truth Examines the role of fertilizers, sulfur, pyrite, acid rain, and nitrogen fixation in soil acidity, underscoring the controversial effect of nitrification on increasing soil acidity over time Addresses the old and new approaches to humic acids by comparing the traditional operational concept against the currently proposed supramolecular and pseudomicellar concept Proposes soil organics, such as nucleic acids of DNA and others, to also adsorb cation ions held as diffusive ion clouds around the polymers Tan explains, in easy and simple language, the chemical make-up of the four soil constituents, their chemical reactions and interactions in soils as governed by basic chemical laws, and their importance in agriculture, industry, and the environment. He differentiates soil chemistry from geochemistry and physical chemistry. Containing more than 200 equations, 123 figures, and 38 tables, this popular text and resource supplies a comprehensive treatment of soil chemistry that builds a foundation

for work in environmental pollution, organic and inorganic soil contamination, and potential ecological health and environmental health risks.

E-Co-Affectivity Marjolein Oele,2020-04-01 E-Co-Affectivity is a philosophical investigation of affectivity in various forms of life: photosynthesis and growth in plants, touch and trauma in bird feathers, the ontogenesis of human life through the placenta, the bare interface of human skin, and the porous materiality of soil. Combining biology, phenomenology, Ancient Greek thought, new materialisms, environmental philosophy, and affect studies, Marjolein Oele thinks through the concrete, living places that show the receptive, responsive power of living beings to be affected and to affect. She focuses on these localized interfaces to explain how affectivity emerges in places that are always evolving, creative, porous, and fluid. Every interface is material, but is also more than its current materiality in cocreating place, time, and being. After extensively describing the effects of the milieu and community within which each example of affectivity takes place, in the final chapter Oele adds a prescriptive, ethical lens that formulates a new epoch beyond the Anthropocene, one that is sensitive to the larger ecological, communal concerns at stake.

On the Ground O'neil Van Horn,2023-12-05 A bold, theoretical, and pragmatic book that looks to soil as a symbol for constructive possibilities for hope and planetary political action in the Anthropocene. Climate change is here. Its ravaging effects will upend our interconnected ecosystems, and yet those effects will play out disproportionately among the planet's nearly 8 billion human inhabitants. *On the Ground* explores how one might account for the many paradoxical tensions posed by the Anthropocene: tensions between planetarity and particularity, connectivity and contextuality, entanglement and

exclusion. Using the philosophical and theological idea of “ground,” Van Horn argues that ground—when read as earth-ground, as soil—offers a symbol for conceiving of the effects of climate change as collective and yet located, as communal and yet differential. In so doing, he offers critical interventions on theorizations of hope and political action amid the crises of climate change. Drawing on soil science, theopoetics, feminist ethics, poststructuralism, process philosophy, and more, *On the Ground* asks: In the face of global climate catastrophe, how might one theorize this calamitous experience as shared and yet particular, as interconnected and yet contextual? Might there be a way to conceptualize our interconnected experiences without erasing critical constitutive differences, particularly of social and ecological location? How might these conceptual interventions catalyze pluralistic, anti-racist planetary politics amid the Anthropocene? In short, the book addresses these queries: What philosophical and theological concepts can soil create? How might soil inspire and help re-imagine forms of planetary politics in the midst of climate change? *On the Ground* thus roots us in a robust theoretical symbol in the hopes of producing and proliferating intersectional responses to climate change.
