Earnings Management, Fintech-Driven Incentives and Sustainable Growth Michael I. C. Nwogugu,2019-11-01 Traditional research about Financial Stability and Sustainable Growth typically omits Earnings Management (as a broad class of misconduct), Complex Systems Theory, Mechanism Design Theory, Public Health, psychology issues, and the externalities and psychological effects of Fintech. Inequality, Environmental Pollution, Earnings Management opportunities, the varieties of complex Financial Instruments, Fintech, Regulatory Fragmentation, Regulatory Capture and real-financial sector-linkages are growing around the world, and these factors can have symbiotic relationships. Within Complex System theory framework, this book analyzes these foregoing issues, and introduces new behaviour theories, Enforcement Dichotomies, and critiques of models, regulations and theories in several dimensions. The issues analyzed can affect markets, and evolutions of systems, decision-making, nternal Markets and risk-perception within government regulators, operating companies and investment entities, and thus they have Public Policy implications. The legal analysis uses applicable US case-law and statutes (which have been copied by many countries, and are similar to those of many common-law countries). Using Qualitative Reasoning, Capital Dynamics Theory (a new approach introduced in this book), Critical Theory and elements of Mechanism Design Theory, the book aims to enhance cross-disciplinary analysis of the above-mentioned issues; and to help researchers build better systems/Artificial-Intelligence/mathematical models in Financial Stability, Portfolio Management, Policy-Analysis, Asset Pricing, Contract Theory, Enforcement Theory and Fraud Detection. The primary audience for this book consists of university Professors, PHD students and PHD degree-holders (in industries, government agencies, financial services companies and research institutes). The book can be used as a primary or supplementary textbook for graduate courses in Regulation; Capital Markets; Law & Economics, International Political Economy and or Mechanism Design (Applied Math, Operations Research, Computer Science or Finance).

Axiomatic Design in Large Systems Amro M. Farid, Nam P. Suh, 2016-06-16 This book provides a synthesis of recent developments in Axiomatic Design theory and its application in large complex systems. Introductory chapters provide concise tutorial materials for graduate students and new practitioners, presenting the fundamentals of Axiomatic Design and relating its key concepts to those of model-based systems engineering. A mathematical exposition of design axioms is also provided. The main body of the book, which represents a concentrated treatment of several applications, is divided into three parts covering work on: complex products; buildings; and manufacturing systems. The book shows how design work in these areas can benefit from the scientific and systematic underpinning provided by Axiomatic Design, and in so doing effectively combines the state of the art in design research with practice. All contributions were written by an international group of leading proponents of Axiomatic Design. The book concludes with a call to action motivating further research into the engineering design of large complex systems.

Designing Organizational Systems Richard Baskerville, Marco De Marco, Paolo Spagnoletti, 2012-10-01 This book is dedicated to the memory of Professor Alessandro (Sandro) D'Atri, who passed away in April 2011. Professor D'Atri started his career as a brilliant scholar interested in theoretical computer science, databases and, more generally information processing systems. He journeyed far in various applications, such as human-computer interaction, human factors, ultimately arriving at business information systems and business organisation after more than 20 years of research based on problem solving. Professor D'Atri pursued the development of an interdisciplinary culture in which social sciences, systems design and human sciences are mutually integrated. Rather than retrospection, this book is aimed to advance in these directions and to stimulate a debate about the potential of design research in the field of information systems and organisation studies with an

interdisciplinary approach. Each chapter has been selected by the Editorial Board following a double blind peer review process. The general criteria of privileging the variety of topics and the design science orientation and/or empirical works in which a design research approach is adopted to solve various field problems in the management area. In addition several chapters contribute to the meta-discourse on design science research.

Management of the Interconnected World Alessandro D'Atri, Marco De Marco, Alessio Maria Braccini, Francesca Cabiddu, 2010-07-27 * Joey F. George I was honored to be asked to open the VI Conference of the Italian Chapter of the Association for Information Systems (ItAIS), held in Olbia, on the Costa Smeralda of Sardinia, Italy, in October 2009. Over 90 research papers were presented over two days, and over 120 people attended the conference. Each day, five parallel sessions featured papers on diverse information systems topics. Session themes included Information and Knowledge Management; Organizational Change and Impact of ICT; IS Quality, Metrics and Impact; E-Justice and Ethics of Information Systems; Information Systems Development and Design Methodologies; E-Services in Public and Private Sectors; Innovation Transfer of IT Research Projects; the Strategic Role of Information Systems; Accounting Management and Information Systems; Human Computer Interaction; and Emerging Issues in a Globalized and Interconnected World. The majority of attendees were from Italy, which would be expected for a meeting of the Italian Chapter of AIS. However, as much as 30% of participants came from elsewhere, from other parts of Europe to be sure, but also from as far away as Nigeria, Mexico and Australia. That the conference was so decidedly international provides support for the 2009 conference theme, "Achieving Fusion in the Interconnected World." Amid lively discussion and intellectual exchanges, professional networks were extended well beyond the Costa Smeralda and new connections and friendships were made.

Psychological Interventions from Six Continents Barbara L. Mercer, Heather Macdonald, Caroline Purves, 2022-07-01 This book presents psychological assessment and intervention in a cultural and relational context. A diverse range of contributors representing six continents and eleven countries write about their therapeutic interventions, all of which break the traditional assessor-as-expert-oriented framework and offer a creative adaptation in service delivery. A Collaborative/Therapeutic Assessment model, including work with immigrant communities, and Indigenous modalities underscore individual and collective case illustrations highlighting equality in the roles of the provider and the receiver of services. The universality and uniqueness of culture are explored as a construct and through case material. Some chapters describe a partnership with a Eurocentric scientific model, while others adopt a purely community method, preserved with Indigenous language and subjective methodology. This volume brings together diverse therapeutic collaborative ideas, and recognizes relational, community, and cultural psychologies as integral to mainstream assessment and intervention literature. This book is essential for psychologists and clinicians internationally and graduate students.

Aging Society and ICT T. Obi, J.P. Auffret, N. Iwasaki, 2013-09-12 It is predicted that by 2050, 22% of the world's population will be over 60 years of age. This rapid shift in demographics calls for the development of coherent and forward-looking policies to address the many challenges which will inevitably arise as a result. This book presents 33 articles from the

workshop jointly organized by APEC and OECD held in Waseda University, Tokyo, Japan, in September 2012. At this workshop, a group of international experts described a wide range of important issues associated with an aging population, and discussed how both governments and the private sector can best mobilize innovation and research to transform this global challenge into an opportunity for active and productive aging and new sources of sustainable growth. The authors call for a comprehensive approach to achieve policy coherence, as well as for strengthening public-private partnerships and promoting collaboration among multiple stakeholders and systems. The book is divided into six chapters, covering such subjects as lessons learnt from best practice, solutions for the aging society, policy initiatives, health innovation, smart communities and new services. Innovation will be necessary to meet the challenges and to mitigate the health, social and economic impacts of an aging population worldwide, as well as unlocking the potential of ICTs through increased research and new models. This book will be of interest to all those whose work involves the development of new services for older people in sectors such as health and nursing care, education and training, transportation, community development and smart cities, among others.

Complex Systems and Sustainability in the Global Auditing, Consulting, and Credit Rating Agency Industries Nwogugu, Michael I. C., 2021-05-07 Current and future issues in the global accounting/consulting, business opportunity, and credit rating agency (CRA) industries can have significant multiplier-effects on international trade, sustainable growth, and compliance (as physical phenomena). These three industries are among the most international and human-capital-intensive of all service industries. In these industries, analysis of business models and industry dynamics can provide insights about how human-computer interaction (HCI) and contract theory affect the evolution of financial market ecosystems and cross-border information flows, and how business models, work-allocation mechanisms, and liability allocation can evolve to manage change. An often-overlooked issue is that non-performing loans (NPLs), sustainability, and CRA efficiency can be significantly affected by business processes, corporate strategy, and HCI in industry ecosystems, multinational corporations (MNCs), and economic systems. Complex Systems and Sustainability in the Global Auditing, Consulting, and Credit Rating Agency Industries compares these three industries and introduces theories of public policy and “inter-business” processes. The book links industry structure, complex systems (including networks), behavioral game theory, structural changes, and antitrust problems to sustainability and the efficiency of pollution-remediation systems. The book introduces new “informal algorithms” and business/resource-allocation models that solve social-choice problems, and also contravene “impossibility theorems” that are at the core of modern computer science and mechanism design. This book is essential for professors and masters/PhD-level students and employees (in industry, financial services, research institutes, consulting firms, and government agencies) who are interested in industrial mathematics and theoretical computer science.
