**One Health Joint Plan of Action, 2022-2026** Food and Agriculture Organization of the United Nations, World Health Organization, United Nations Environment Programme, World Organisation for Animal Health, 2022-10-14 Following the 27th Tripartite Annual Executive Meeting, the FAO Programme Committee in its 130th session, March 2021, requested the joint development, by the Tripartite (FAO/WHO/WOAH) and others, of a strategy and action plan to prevent future zoonotic pandemics through the One Health approach. The One Health Joint Plan of Action (OH JPA) is intended to guide the four organizations of the Quadripartite to work together on One Health with the aim of supporting their Members to build One Health capacities. It provides a framework for action and proposes a set of activities that the four organizations can offer together to enable countries to advance and scale up One Health in managing human, animal, plant and environment health threats. The framework uses a One Health approach to strengthen collaboration, communication, advocacy, and coordination equally across all sectors responsible for addressing health concerns at the human-animal-plant-environment interface.

**Defining access to countermeasures** World Health Organization, 2025-06-15 This landscape report on the current status of activities related to medical countermeasures (MCMs) for pandemic response underscores the urgent need for action in this critical area. From bolstering research and development to diversifying manufacturing capacities, coordinating global procurement efforts, ensuring equitable allocation approaches for these lifesaving interventions, and making sure arrangements are in place so that they reach the very last mile and enable appropriate use by those in need, the journey toward pandemic preparedness traverses a multifaceted landscape. Yet, despite the progress made, critical gaps in MCM-

related aspects remain, and vulnerabilities urgently need to be addressed. This report explores scientific advancements and ongoing or planned activities in the field of MCMs. While there is much progress to note and acknowledge, it is evident that significant work remains to strengthen our abilities to prepare for and respond to pandemics. Moreover, no single entity can tackle this monumental task alone. A network of networks is needed, wherein collaboration and coordination among regional and global health actors are strengthened, ensuring a coherent, streamlined, and accountable approach to pandemic preparedness. This report emphasizes the importance of collective effort in navigating the complex landscape of medical countermeasures and enhancing global health security.

**Plan de acción conjunto "Una sola salud" (2022-2026)** Organisation des Nations Unies pour l'alimentation et l'agriculture,PNUMA,OMS,OMSA,2024-01-08 Las organizaciones de la asociación cuatripartita —la Organización de las Naciones Unidas para la Alimentación y la Agricultura (FAO), el Programa de las Naciones Unidas para el Medio Ambiente (PNUMA), la Organización Mundial de Sanidad Animal (OMSA, originariamente OIE) y la Organización Mundial de la Salud (OMS)— trabajan conjuntamente a fin de impulsar los cambios y las transformaciones necesarios para mitigar el impacto de los retos actuales y futuros para la salud que entraña la interfaz entre seres humanos, animales, plantas y medio ambiente a escala mundial, regional y nacional. Como respuesta a la demanda internacional de prevenir futuras pandemias y fomentar la salud de manera sostenible mediante el enfoque Una sola salud, la asociación cuatripartita ha elaborado el presente Plan de acción conjunto sobre Una sola salud (2022-2026).El Plan refleja el compromiso de las cuatro organizaciones de promover y respaldar colectivamente la implementación del enfoque Una sola salud. *Agents of Innovation* John Trost Kuehn,2008-11-01 Agents of Innovation examines the influence of the General Board of the Navy as agents of innovation during the period between World Wars I and II. The General Board, a formal body established by the Secretary of the Navy to advise him on both strategic matters with respect to the fleet, served as the organizational nexus for the interaction between fleet design and the naval limitations imposed on the Navy by treaty during the period. Particularly important was the General Board's role in implementing the Washington Naval Treaty that limited naval armaments after 1922. The General Board orchestrated the efforts by the principal Naval Bureaus, the Naval War College, and the Office of the Chief of Naval Operations in ensuring that the designs adopted for the warships built and modified during the period of the Washington and London Naval Treaties both met treaty requirements while attempting to

meet strategic needs. The leadership of the Navy at large, and the General Board in particular, felt themselves especially constrained by Article XIX (the fortification clause) of the Washington Naval Treaty that implemented a status quo on naval fortifications in the Western Pacific. The treaty system led the Navy to design a measurably different fleet than it might otherwise have in the absence of naval limitations. Despite these limitations, the fleet that fought the Japanese to a standstill in 1942 was predominately composed of ships and concepts developed and fostered by the General Board prior to the outbreak of war.

*Integrated System Health Management* Jiuping Xu, Lei Xu, 2017-05-18 ISHM is an innovative combination of technologies and methods that offers solutions to the reliability problems caused by increased complexities in design, manufacture, use conditions, and maintenance. Its key strength is in the successful integration of reliability (quantitative estimation of successful operation or failure), diagnosability (ability to determine the fault source), and maintainability (how to maintain the performance of a system in operation). It draws on engineering issues such as advanced sensor monitoring, redundancy management, probabilistic reliability theory, artificial intelligence for diagnostics and prognostics, and formal validation methods, but also quasi-technical techniques and disciplines such as quality assurance, systems architecture and

engineering, knowledge capture, information fusion, testability and maintainability, and human factors. This groundbreaking book defines and explains this new discipline, providing frameworks and methodologies for implementation and further research. Each chapter includes experiments, numerical examples, simulations and case studies. It is the ideal guide to this crucial topic for professionals or researchers in aerospace systems, systems engineering, production engineering, and reliability engineering. - Solves prognostic information selection and decision-level information fusion issues - Presents integrated evaluation methodologies for complex aerospace system health conditions and software system reliability assessment - Proposes a framework to perform fault diagnostics with a distributed intelligent agent system and a data mining approach for multistate systems - Explains prognostic methods that combine both the qualitative system running state prognostics and the quantitative remaining useful life prediction
