*The Paleontology of Gran Barranca* Richard H. Madden, 2010-06-17 A wealth of new information on the diversity, evolution and geochronology of the uniquely complete fossil record of Gran Barranca.

*The Museum of Babel* Mark Thurner, 2024-12-06 The Museum of Babel: Meditations on the Metahistorical Turn in Museography is a thought-provoking, transatlantic reading of contemporary exhibits of the museum's own past. Museums everywhere now exhibit 'evocations' of their own pasts, often in the form of refashioned, ancestral cabinets of curiosities. Moving beyond discussions of 'the return to curiosity,' Thurner calls this retrospective trend the metahistorical turn in museography. Providing engaging and lively meditations on exhibits of the museal past in art, natural history, archaeology, and anthropology museums, including the Prado, the Royal Cabinet of Natural History, the Ashmolean, the British Museum, the Louvre, Coimbra's Science Museum, Brazil's scorched Museu Nacional, Mexico's Museum of Anthropology, Argentina's Museo de la Plata, and the Venice Art Biennale, Thurner argues that the ongoing metahistorical turn in museography is exposing the museum's true vocation, which is to be a museum of itself, or metamuseum. In a word, The Museum of Babel is a provocative meditation on the museum's true vocation. As such, it will be essential reading for museologists, curators, museum professionals, historians and philosophers of art and science, anthropologists, and students in an array of related fields, including museum studies, cultural studies, global studies, history, archaeology, anthropology, design, and art history.

*South American Sauropodomorph Dinosaurs* Alejandro Otero, José L. Carballido, Diego Pol, 2022-04-25 Sauropodomorpha Huene 1932 is one of the most successful groups of dinosaurs, including the most abundant and diverse herbivorous forms with a worldwide record, extending from the late Triassic to the late Cretaceous. Sauropodomorphs comprise a diverse assemblage of early forms (traditionally called "prosauropods") and the well-established clade Sauropoda Marsh 1878. Early sauropodomorphs were small to medium sized forms, with long necks and reduced skulls, mostly bipeds and omnivores and were abundant in continental environments in the Late Triassic and Early Jurassic. With more than 150 valid species and a worldwide distribution, Sauropoda includes the dominant herbivorous dinosaurs, from the Middle Jurassic to the Late

Cretaceous. Its unique body plan, characterized by gigantic size, graviportal locomotion, long necks and tails, and reduced skulls, made this group an undisputed icon in popular culture since the 19th century. In South America, the sauropodomorph record is particularly rich and abundant, and many species have shed light to understand important milestones in the evolutionary history of this group of dinosaurs. The origin of Sauropodomorpha, the transition to Sauropoda, and the diversification of its most successful evolutionary lineages are largely exemplified by the South American fossil record. In this contribution, we synthesize the diversity of sauropodomorphs from South America, including data on their geographic and stratigraphic provenance, phylogenetics, paleobiology, taphonomy and behaviour, underscoring their significance within the context of sauropodomorph evolution.

Mammals of South America, Volume 2 James L. Patton, Ulyses F. J. Pardiñas, Guillermo D'Elía, 2015-03-09 The second installment in a planned three-volume series, this book provides the first substantive review of South American rodents published in over fifty years. Increases in the reach of field research and the variety of field survey methods, the introduction of bioinformatics, and the explosion of molecular-based genetic methodologies have all contributed to the revision of many phylogenetic relationships and to a doubling of the recognized diversity of South American rodents. The largest and most diverse mammalian order on Earth—and an increasingly threatened one—Rodentia is also of great ecological importance, and Rodents is both a timely and exhaustive reference on these ubiquitous creatures. From spiny mice and guinea pigs to the oversized capybara, this book covers all native rodents of South America, the continental islands of Trinidad and Tobago, and the Caribbean Netherlands off the Venezuelan coast. It includes identification keys and descriptions of all genera and species; comments on distribution; maps of localities; discussions of subspecies; and summaries of natural, taxonomic, and nomenclatural history. Rodents also contains a detailed list of cited literature and a separate gazetteer based on confirmed identifications from museum vouchers and the published literature.

*Mammals of South America, Volume 2* Alfred L. Gardner, James L. Patton, 2007 The vast terrain between Panama and Tierra del Fuego contains some of the world's richest mammalian fauna, but until now it has lacked a comprehensive systematic reference to the identification, distribution, and taxonomy of its mammals. The first such book of its kind, *Mammals of South America* both summarizes existing information and encourages further research of the mammals indigenous to the region. It includes identification keys and brief descriptions of each order, family, and genus. Species accounts include taxonomic descriptions, synonymies, keys to identification, distributions with maps and a gazetteer of marginal localities, lists of recognized subspecies, brief summaries of natural history information, and discussions of issues related to taxonomic interpretations.

**Coastal Marine Ecosystems of Latin America** U. Seeliger, B. Kjerfve, 2013-03-14 Coastal and marine ecosystems, some

severely degraded, other still pristine, control rich resources of inshore environments and coastal seas of Latin America's Pacific and Atlantic margins. Conflicts between the needs of the region's nations and diminishing revenues and environmental quality have induced awareness of coastal ecological problems and motivated financial support for restoration and management. The volume provides a competent review on the structure, processes and function of 22 important Latin American coastal marine ecosystems. Each contribution describes the environmental settings, biotic components and structure of the system, considers trophic processes and energy flow, evaluates the modifying influence of natural and human perturbations, and suggests management needs. Although the focus of the book is on basic ecological research, the results have application for coastal managers.

South American Contributions to World Archaeology Mariano Bonomo, Sonia Archila, 2021-11-08 This book focuses on South American archaeology and its contributions to the broader global archaeological discussion in theory, methods and new interpretations of the archaeological record. These include discussions on human peopling and colonization of the continent, domestication of plants and emergence of complex societies. This volume covers a wide variety of sub-disciplines in archaeology, including archaeobotany, zooarchaeology, molecular archaeology, bioarchaeology, geoarchaeology. The chapters span from the pre-Columbian to contemporaneous indigenous societies for all the main geographical and ecological zones of South America. The book discusses how particular cases of South American archaeology have contributed to the understanding of a global and basic issue: human relations with their environments and landscapes during the past. The authors focus on the latest results produced by multidisciplinary studies carried out at archaeological sites in several areas of South America ranging from studies of early hunter-gatherers through the historic period. This work would be of interest to researchers in archaeology and Latin American studies.

Thorp and Covich's Freshwater Invertebrates Neusa Hamada, James H. Thorp, D. Christopher Rogers, 2018-08-30 Thorp and Covich's *Freshwater Invertebrates*, Fourth Edition: Keys to Neotropical Hexapoda, Volume Three, provides a guide for identifying and evaluating a key subphylum, hexapoda, for Central America, South America and the Antarctic. This book is essential for anyone working in water quality management, conservation, ecology or related fields in this region, and is developed to be the most modern and consistent set of taxonomic keys available. It is part of a series that is designed to provide a highly comprehensive, current set of keys for a given bioregion, with all keys written in a consistent style. This series can be used for a full spectrum of interested readers, from students, to university professors and government agencies.

- Includes zoogeographic coverage of the entire Neotropics, from central México and the Caribbean Islands, to the tip of South America
- Identifies aquatic springtails (Collembola) and insects to the genus level for many groups, and family or subfamily level for less well known taxa
- Presents multiple keys, from higher to lower taxonomic levels that are appropriate

for each users' level of scientific knowledge and needs - Provides a general introduction and sections on limitations, terminology and morphology, material preparation and preservation, and references

*Examining Evolutionary Trends in Equus and its Close Relatives from Five Continents* Raymond Louis Bernor, Gina Marie Semprebon, Florent Rivals, Leonardo Santos Avilla, Eric Scott, 2020-03-12 Evolution of the horse has been an often-cited primary example of evolution, as well as one of the classic and important stories in paleontology for over a century and a half, due to their rich fossil record across 5 continents: North America, South America, Europe, Asia and Africa. The recent horse has served a profound role in human ancestry, including agriculture, commerce, sport, transport, warfare, and in prehistory, for the subsistence of humans. Many studies have examined the evolution of the Equidae and chronicled the striking changes in skulls, dentition, limbs, and body size which have long been perceived to be a response to environmental shifts through time. Most comprehensive studies heretofore have: (1) focused on the "Great Transformation"- changes that occurred in the early Miocene, (2) involved tracking long-term diversity or paleoecological trends on a single continent or within a geographical locality, or (3) concentrated on the 3-toed hipparions. The Plio-Pleistocene evolutionary stage of horse evolution is punctuated by the great climatic fluctuations of the Quaternary beginning 2.6 Ma which influenced Equus evolution, biogeographic dispersion and adaptation on a nearly global scale. The evolutionary biology of Equus evolution across its entire range remains relatively poorly understood and often highly controversial. Some of this lack of understanding is due to assumptions that have arisen because of the relatively derived craniodental and postcranial anatomy of Equus and its close relatives which has seemed to imply that that these forms occupied relatively homogenous and narrow dietary and locomotor niches - notions that have not been adequately addressed and rigorously tested. Other challenges have revolved around teasing apart environmentally-driven adaptation versus phylogenetically defined morphological change. Geochronologic age control of localities, geographic provinces and continents has improved, but in no way is absolute and can be reexamined in our proposed volume. Temporal resolution for paleodietary, paleohabitat and paleoecological interpretations are also challenging for understanding the evolution of Equus. Our proposed volume attempts to assemble a group of experts who will address multiple dimensions of Equus' evolution in time and space.

**American and Australasian Marsupials** Nilton C. Cáceres, Christopher R. Dickman, 2023-06-30 This book focuses on the evolution, biogeography, systematics, taxonomy, and ecology of New World and Australasian marsupials, greatly expanding the current knowledge base. There are roughly 140 species of New World marsupials, of which the opossum is the best known. Thanks to recent research, there is now an increasing amount of understanding about their evolution, biogeography, systematics, ecology, and conservation in the Americas, especially in South America. There are also some 270 marsupial species in the Australasian region, many of which have been subject to research only in recent years. Based on this information and the authors' extensive research, this book provides comprehensive insights into the world's marsupials. It

will appeal to academics and specialized researchers, students of zoology, paleontology, evolutionary biology, ecology, physiology and conservation as well as interested non-experts.

*Early Miocene Paleobiology in Patagonia* Sergio F. Vizcaíno, Richard F. Kay, M. Susana Bargo, 2012-10-11 Coastal exposures of the Santa Cruz Formation in southern Patagonia have been a fertile ground for recovery of Early Miocene vertebrates for more than 100 years. This volume presents a comprehensive compilation of important mammalian groups which continue to thrive today. It includes the most recent fossil finds as well as important new interpretations based on ten years of fieldwork by the authors. A key focus is placed on the paleoclimate and paleoenvironment during the time of deposition in the Middle Miocene Climatic Optimum (MMCO) between twenty and fifteen million years ago. The authors present the first reconstruction of what climatic conditions were like and present important new evidence of the geochronological age, habits and community structures of fossil bird and mammal species. Academic researchers and graduate students in paleontology, paleobiology, paleoecology, stratigraphy, climatology and geochronology will find this a valuable source of information about this fascinating geological formation.
