**Aprende a Formular Productos Cosméticos** José Luis Navarro Bordonaba, 2020-03-24 La elaboración de productos cosméticos ha dejado de ser un secreto guardado celosamente por los fabricantes. Hoy en día cualquiera capaz de interpretar una fórmula puede formular sus propios cosméticos en casa. La necesidad de elaborar productos cosméticos personalizados en casa nace de la dificultad de encontrar productos cosméticos dermatológicamente adecuados a las necesidades específicas de cada persona. La finalidad de esta publicación es suministrar la información básica necesaria para que el lector(a) pueda comenzar a elaborar sus propios productos de cosmética en su casa. Esta publicación no es un compendio de formulaciones de productos de cosmética, sino una guía básica de formulación. Por ello, se incluyen algunas formulaciones a modo de ejemplo para ilustrar la aplicación de los principios teóricos de formulación aquí descritos. Los

lectores más avanzados pueden obtener formulaciones de productos cosméticos de acceso libre en las páginas web de los fabricantes y proveedores de las materias primas utilizadas en la elaboración de productos cosméticos. Finalmente, en el anexo de esta publicación se incluyen proveedores tanto de materiales como de productos químicos utilizados en la elaboración de productos cosméticos.

From 1914 to 1966 the retail cosmetic sales within the U.S.A. went from almost \$40 million to well over \$3 billion. Part of the reason for this upsurge can be attributed to the increased interest shown by men in cosmetic products such as various shaving creams, colognes, hair tonics and conditioners. Because of the importance of this field of chemical science, it seemed pertinent to produce a chemical formulary specializing in cosmetic preparations of all types. The formulas and data in this book have all been contributed within the past twelve months by the companies listed on page iv. They are printed as contributed and thus there are variations in manner of presentation. The formulas included here are of an experimental nature and are intended to be used as starting points for the industrial chemist, and for those who wish to experiment in their own right. Many of the formulas can serve as successful products without any alterations required. However, once the chemist has familiarized himself with the formulas as they stand, the adventure of individual experimentation begins.
