Baumgart, 2011-12-28 The conditions of Crohn's disease and ulcerative colitis are excellent examples of how the exponential growth of knowledge in biomedical science can make a remarkable impact on clinical practice and patient's quality of life. It has led to the development of unique novel immunomodulatory treatments. New therapies are sometimes complex and associated with important risks requiring a deeper understanding of their molecular principles from clinicians. Crohn's Disease and Ulcerative Colitis serves as a unique combined resource for physicians and scientists addressing the needs of both groups. It will stimulate exchange and collaboration and shorten the path between discovery and application of new knowledge and also help clinicians understand new therapeutic concepts from their origins.
