**On Becoming a Person** Carl Ransom Rogers,1961 Abstract: A psychotherapist's clinical dealings with personal counseling and interpersonal relationships, from a context of personal experience and learning, is reviewed in a collection of papers designed for professionals in many disciplines. Understanding of person-centered concepts such as self-actualization, individual growth, and personal goals, may lead to lessening of tensions in human relations. The therapeutic relationship facilitates the process of growth and change in a client. Characteristics of helping relationships are described. The therapist expresses his view of how a fully functioning person behaves. Research in client-centered psychotherapy is discussed. Psychotherapy has potential implications for education, interpersonal communication, family life, and personal creativity. Behavioral sciences should play a constructive role in personal development.

**Carl Rogers' Helping System** Godfrey T Barrett-Lennard,1998 'This book... is not a single meal in itself but a positive larder containing every imaginable staple food and condiment all exquisitely and thoroughly researched. The book took Goff Barrett-Lennard 20 years to write and it will stand as a reference text for person-centred specialists for longer than that... an essential reference text... and a pantry full of delicious surprises' - Counselling, The Journal of the British Association for Counselling 'Probably the most important piece of work on the person-centred approach to have emerged in recent years... an essential source of reference for anyone with a serious interest in the person-centred approach' - Counselling News Wri

**On Becoming a Group Member** Muhyiddin Shakoor,2011-01-19 This book provides an introduction to the general landscape of group counseling by way of the idea that learning to be an effective group member is essential to becoming a group leader. Interactive scenarios place the reader right into the group, providing insights into the challenges and opportunities of participation. Each chapter explores a different stage of group work and concludes with useful suggestions and tips for having a successful experience. Throughout the book, an emphasis is placed on member development and personal growth being achieved through self-awareness, interpersonal experiences, and dynamic ways of being. Cultural diversity, ethics and confidentiality, and involvement strategies and skills are also discussed. With its unique, practical, and engaging approach, this book will be invaluable to counseling students as an excellent complement to the theory and research on group counseling.

Being Empathic Steve Vincent,2016-07-12 'This is the most stimulating, thorough, in-depth work on empathy as

originated and developed by Carl Rogers within client-centred therapy and the person-centred approach that a reader will find. It provides a rigorous look at empathic understanding, with practical case illustrations throughout. 'What a 'cornucopia' of offerings are provided in this book. The quotes and extracts from Rogers are always to the point, and explorations of the concepts rich and original, each amplifying, yet not changing, Carl's meanings. This book has a unique format and style, merging tradition with innovation and whimsy. It is both intellectually stimulating and very personal. I was delighted with the wit, humour, and plays on words. When compared with the reductionistic, stereotypic depiction of Rogers' work in so many previous texts outside the Person Centred Approach community, this book is a breath of fresh air. I believe Steve has guided us with elegance and insight, wisdom and compassion, towards deeper understandings of the genius and profundity of Carl Rogers' work and his principles. While the audience for this book might best be considered to be those in training as therapists, or students using the book as a university text, it will also be most helpful for practitioners who want to review and renew a deeper understanding of Rogers' approach. Potential clients, in seeking a safe haven for their deep explorations, may also profit greatly from this book as a guide in their search.' Gay Leah Barfield in her Foreword

**Psychologizing** Patrick M. Whitehead, 2016-09-14 Psychologizing introduces students to the study of psychology by encouraging them to approach the subject on a personal level. Classroom-tested, the psychologizing model emphasizes learning through practice. A conversational and highly engaging narrative prompts students to begin thinking like psychologists as they examine key concepts, including learning, development, personality, and emotion. Based on the practice of phenomenology, Psychologizing emphasizes meaning and context. Chapters include a discussion of influential psychologists who have adopted this attitude and, in doing so, have forever changed the way that we understand thinking and learning. By exploring how experience is always meaningful, and how meaning can only be understood within a context, students will sharpen and develop critical thinking, and reflect on how they identify and shape meaning in their own lives. This book is accompanied by ancillaries designed to enhance the experience of both instructors and students: Instructor's Manual. This valuable resource provides a sample syllabus, open response activities for discussion, suggested research paper guidelines, and sample rubrics. Test Bank. For every chapter in the text, the Test Bank includes questions in multiple choice, true/false, and essay formats.

**Selected Writings of Maureen O'Hara on the Art, Science, and Hope of Humanism** Keith Tudor, Maureen O'Hara, 2025-06-30 This book presents the work of the eminent British-American psychologist, Maureen O'Hara. It explores the trajectory of humanistic psychology over the last few decades, providing a link between its original proponents, notably Carl Rogers, and its contemporary manifestations. The text reproduces 18 of O'Hara's original papers arranged in six parts,

each of which reflects a significant area in which she has contributed her rigorous analysis and creative thinking, i.e., the person-centred approach, humanistic psychology, third force science, client-centred therapy, psychology futures, and education. A unique feature of the book is a series of dialogues about O'Hara's contributions in each of these areas with the book's editor, Keith Tudor. The dialogues reveal not only O'Hara's reflections on and further thinking about each area of her contributions, but also how prescient her analysis was, and how contemporary and relevant her thinking still is. Bringing together a collection of O'Hara's works to a broader audience, this book will be of interest to humanistic psychologists and psychotherapists, as well as those studying and/or training in this field.

*Psychotherapy as a Developmental Process* Michael Basseches, Michael F. Mascolo, 2009-08-05 For all those engaged in psychotherapy practice, regardless of modality or approach, the goal of this book is to provide a framework and method for thinking about their work that allows for critical reflection on their own successes and disappointments, and on the similarities and differences among their own and other practitioners' work with different clients. The authors use a novel common factors approach, based on the idea that some form of development is the outcome of all effective psychotherapy, despite other differences that may exist. While most existing psychotherapy research focuses on treatment outcomes, primarily in terms of symptom reduction, this book offers an alternative research approach that systematically tracks the psychotherapy process itself, and describes each case's unique developmental outcome. In particular, Basseches & Mascolo focus on the questions of what kinds of therapeutic resources therapists are offering to their clients and whether and how clients are able to make use of these resources in the service of their own development. The goal is to provide a descriptive framework that can be used to appreciate the highly varied ways in which particular therapists tailor their work to unique clients' developmental needs, while at the same time offering a prescription of a more rigorous method for recognizing and correcting the problem when a particular therapist's way of working is not serving the client well. Ideally, this type of

process-focused research will complement existing outcome research, and be more likely than further symptom-reduction studies to result in the improvement of overall psychotherapy success rates.

**Building Knowledge in Architecture** Richard Foqué, 2010 Foqué establishes a general design theory based on the axioms of pragmatic thinking, a crucial unity between experience and the process of learning, and between conceptual thought and situational consciousness. *Building Knowledge* develops a theoretical framework and practical instrumentation to establish a knowledge base for the discipline of architecture. Part one of the book presents design methods as a third way of investigating reality apart from scientific methods or the conception of art. By describing the science-philosophical context, Foqué extensively analyses the nature of design activity and the design process, its inherent characteristics, and the differences between science and art. As such, it is argued that design processes have a research dimension in sich, which are essentially contextual and action driven. Foqué offers an integrated and comprehensive perspective to understand design activity both from an epistemological and practical standpoint. This results in an expanded discourse about the true nature of architectural design processes. Within this theoretical framework, part two explains how case study research is a primordial means to establish a knowledge base for the discipline and profession of architecture. From this premise, Foqué compares case study research in law, medicine and business administration and develops a practical and comprehensive approach to case studies in architecture. The methodology offers a solid and general framework wherein a consistent body of knowledge regarding architectural design processes can be generated. This promotes deeper insight in the complex relationship between context, product and process, which governs every design process on the one hand, and between the several

stakeholders involved on the other hand.--Publisher.

**Virtually Lost** Garry Robson, 2023-05-16 This book examines the connections between the psycho-social difficulties and challenges faced by children and younger people in their online lives; the structure, character, and motivations of the corporate system 'behind' the screen; and the possibility that the digital technostructure may come to form the backbone of a new post-democratic system of technocratic governance. Much of the originality of this book lies in its blending of subjects that are not often combined, thereby offering a fresh perspective: 'generation studies'; the philosophy of technology; the history of the idea of technocracy; the technologically enhanced merger of corporate-governmental power in the U.S. system; the society-shaping goals and capabilities of the big tax-exempt American foundations over the last hundred years; the elite 'superclass' gaming of formally constituted transnational and global institutions; and the way the United Nations-centred SDG-ESG system is itself developing in the direction of a technocratic system of economic and population management. The book will appeal to readers interested in relationships between our contemporary global power elite, the structures it has created and processes it has set in motion, and how these affect young people whose development is already being over-determined by the activities of the big Silicon Valley entities and their associates.

**Psychologists on the March** James H. Capshaw, 1999-01-13 Why are there so many psychologists in America today? *Psychologists on the March* seeks to answer this question through historical analysis of the middle years of this century. The book argues that the Second World War exerted a profound influence on the shape and structure of the field, transforming it from a small academic subject into an enormous mental health profession. It provides a case study of the interaction of scientific expertise and professional practice in the construction of a modern discipline.
