*How far can airplanes glide?* - Aviation Stack Exchange Apr 3, 2014 · What governs the 'glideability' of the plane? As above, its lift-to-drag ratio. Very casually speaking this is just a measure of how "aerodynamic" the airplane is, comparing its capability to generate lift with the drag it creates in the process. The better its lifting capabilities, or the less drag it generates, the higher the ratio. *What are typical values of the lift-to-drag ratio for normal small ...* May 7, 2020 · Hi I am trying to do a rough estimation of forces acting on an aircraft wing and would like to know what kind of lift to drag ratio is normal. The exact profile hasn't been chosen yet, but the airc... aerodynamics - What is the maximum theoretical lift of a plane as ... Jan 6, 2016 · In the case of Cessna 172, using 0.8 for the Oswald factor and 0.3 for the zero-lift drag coefficient and considering the efficiency of the propeller as being 70%, I get a max lift that is more than double the gross weight of the plane which is 1111 kg. What does deploying landing flaps do to the (L/D)max and ... May 8, 2022 · I thought that deploying flaps will increase both the drag and lift, thus increasing L/D ratio? But do they increase proportionately? And how exactly does that correlate with the increase/decrease ... **What was the Space Shuttle's glide ratio? - Aviation Stack Exchange** 12 The NASA website quotes an approximate ratio of 1 The shuttle was designed with a low L/D ratio ( $\sim 1$ ) because during the descent the spacecraft must be slowed from about 17,300 mph to about 250 mph at landing. (Source) Note that glide ratio is normally equal to the lift to drag ratio - Wikipedia article - Aviation.SE Question Why is the L/D ratio numerically equal to the glide ratio? Sep 1, 2020 · 7 \*L/D is ratio of two forces, lift and drag. \*Glide ratio is ratio of two distances. Can you explain mathematically how they end up numerically equal and are they always equal? **Is (L/D)max achieved at a specific speed or AOA?** Jul 5, 2019 · Maximum lift is the largest lift force that an aerodynamic surface can provide at a specific speed (more accurately, dynamic pressure). Lift to drag ratio is a measure of how efficient the surface is at generating lift at the expense of drag (for an airplane, drag means more propulsion required). *Is there a maximum lift to drag ratio?* - Aviation Stack Exchange Apr 1, 2015 · The starting point in designing an airplane often sets the initial configuration such that wing-skin friction drag is equal to the mathematical lift-induced drag. Following that calculation, we start adjusting things until an acceptable configuration emerges. The more realistic the first guess, the sooner the configuration emerges. *How does the Boeing 787 Dreamliner's glide ratio compare to ...* As discussed here, glide ratio is related to the L/D (lift-to-drag) ratio of the plane. When talking about commercial aircraft, "glide ratio" is typically used to mean the ratio with engines inoperative. If

the jet engines aren't running, they add a lot of drag, which will decrease the L/D ratio from the typical max value. This analysis estimates the max L/D of the 787 at 20.8, while this site ... **What is the performance of a flat plate wing? - Aviation Stack ...** Sep 30, 2015 · Expect fuel consumption to increase in line with the drag increase. The stall speed of an aircraft with a flat plate wing will be approx. 50% higher than with a proper airfoil on the wing, and drag will increase much more at high lift coefficients than usual, which translates into very low sustained turn rates and load factors.
